

## Temperature Controlled Shipments

Global Logistics Solutions, Inc. (GLS) has a strong established customer/supplier relationship with a network of key temperature control capable carriers. This means that GLS can offer our clients a broad range of services for long haul and local shipments for both Less Than Load (LTL) and Full Truck Loads (FTL).

Because of our strategic alliance with a number of best-in-class climate controlled carriers, GLS can ensure, in this limited resource environment, that your shipment is picked up when ready and delivered when required. It is this level of flexibility that has allowed us to grow this business sector significantly year after year. In addition, we can protect against mixing loads of odor sensitive goods with shipments such as seafood products. GLS works closely with all of our carriers to establish scheduled delivery appointments when required.

In summary, GLS ensures the following value-added services:

- Responsive pickup and delivery service to meet specific customer expectations
- A proven track record of delivering on-time to large distribution centers (DC) such as Wal-Mart, Target, McLane, etc.
- GLS has access to most major DC on-line scheduling systems for fast and efficient appointment scheduling
- One source real-time tracking, from pick up to delivery, via the GLS web site for all shipments regardless of carrier
- Climate controlled warehousing throughout the country
- Automated custom reports that align with our client's Balanced Scorecard metrics and provide the tools to manage freight costs as well as optimize this critical element of the supply chain.

GLS is your single-source solution for shipping climate controlled product worldwide.
